LEOxChange: My story by Khamis Imtiaz

My name is Khamis Imtiaz, and I would like to share my experience with LEOxChange.

I wanted to join LEOxChange so I could trade digital currencies like LEOcoin and Bitcoin. I started with a small amount just to try it. After registering I saw that to trade seriously I would have to get verified up to Tier 4. I had a bigger amount reserved for future trading so I wanted to get to Tier 4.

It was simple to get to Tier 3 but I found myself stuck. I could not get through Tier 4 verification. Everything I did seemed to be wrong. I was fed up and was just thinking about whether to give up on this platform when I remembered something Dan Andersson had said "Never give up on your dream."

So I contacted the support team and got through to Marios. I told him the situation and he said not to worry and told me the policies on how to get verified. I followed his advice and got verified in one day.

I know users have been facing many issue to get Tier 4 verification. But yesterday Marios guided me and today I am verified in Tier 4. I found him active and efficient all the time.

LEOxChange is a professional and secure platform; that is why some tasks are hard to do as my issues showed; but I have good experience with the LEO support team. Special thanks and regards to Lubna Saleem and Marios and a big thanks to Mahboob as well.

I have learned a lot with this, so now I would say that if someone from Pakistan has any issue in verification or gets error 666 for computer wallet, they can contact me. I can share my experience with them.
